PROFESSIONAL EXPERIENCE

Amazon **Jun 2026 – Present**
Software Development Engineer *Bengaluru - India*

- Built and deployed a serverless service using Java, AWS Lambda and CDK(TypeScript) as part of Amazon's SDE onboarding, covering the full build-test-deploy lifecycle using internal engineering tools.
- Contributing to the Amazon Live video player, working within a distributed, shoppable-livestreaming platform serving production traffic at scale.

Tredence **Jun 2025 – Jun 2026**
Data Engineer *Bengaluru - India*

- Migrated 100+ enterprise data workloads from Teradata to Databricks Lakehouse for a multi-billion-dollar global FMCG organization.
- Designed LLM-powered agentic workflows using Claude Code to automate PySpark notebook generation, reducing development time by 75% and increasing migration throughput by 4x.
- Built an AI-powered code review workflow that automatically analyzed generated notebooks, surfaced implementation issues, and produced structured review reports, improving code quality and review consistency across the team.

PROJECTS

AI-Powered Data Lineage Extraction System | Python, Gemini API, Prompt Engineering

- Automated data lineage extraction for Teradata BTEQ pipelines, reducing manual analysis time from hours to minutes (90–95%) by eliminating manual dependency tracing.
- Built a hybrid LLM + rule-based parsing system using Google Gemini, implementing recursive backtracking to trace data flow beyond staging/volatile tables to true base sources.
- Designed a deterministic pipeline with structured JSON outputs, schema parameter mapping, and batch processing, enabling scalable and consistent lineage analysis across multiple workflows.

Real-Time Cloud Data Ingestion & Analytics | Snowflake, ADLS, SQL

- Architected a serverless near-real-time data ingestion and ELT pipeline using Snowpipe, Streams (CDC), and Tasks to continuously load transactional data from Azure ADLS into Snowflake.
- Built scalable data transformation and analytics layers with SQL, implementing data validation, Type 1 & Type 2 Slowly Changing Dimensions (SCDs), and IQR-based outlier detection to deliver analytics-ready datasets.
- Implemented enterprise-grade security and governance using RBAC, dynamic data masking, and network policies, enabling secure, compliant, and self-service analytics through Snowsight.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C++, TypeScript
Cloud & Data Technologies: AWS (Lambda, CDK), Databricks, Snowflake, Microsoft Azure
AI & Developer Tools: Claude Code, Google Gemini API, Git, GitHub, Linux
Core Competencies: Software Engineering, Distributed Systems, Data Engineering, GenAI, Machine Learning, Data Structures & Algorithms, Object-Oriented Programming (OOP)

EDUCATION

National Institute of Technology, Calicut **Dec 2021 – Aug 2025**
B.Tech - Electrical and Electronics Engineering ***CGPA - 8.03***

CERTIFICATIONS

- Databricks Certified Data Engineer Associate — Databricks
- SnowPro Core Certification — Snowflake
- Academy Accreditation - Generative AI Fundamentals — Databricks
- Supervised Machine Learning: Regression and Classification — Stanford University(Coursera)
